

HYGIENE FOIL

Hygiene foil with 100% UV permeability enables rapid disinfection without a long exposure time or harmful aerosols from disinfectant cleaners. The acrylic panel is protected from scratches, abrasion and dulling. 1000 meters on the roll are available in various widths for a hygienically clean feeling on the tanning bed.

PRODUCT FEATURES

100% safe disinfection and UV permeability

The widespread use of disinfectant cleaners is no guarantee for the real disinfection of the sunbed surfaces. In practice, the exposure time of 1 minute or longer can often not be maintained.

Absolute hygiene

The surface of the skin does not come into contact with the plexiglass surface. This ensures absolute hygiene when sunbathing.

Fast application and high stability

The application does not require any more time than cleaning with liquid cleaners. The foil is stable and of high quality. This ensures wrinkle-free contact with the plexiglass surface.

No dulling, abrasion, scratching of the acrylic surface

Many disinfectant cleaners are too aggressive and dull the plexiglass surfaces over time. The foil protects the plexiglass surface against scratches such as those caused by piercings or similar.

Various widths available

Die Hygienefolie ist in verschiedenen Breiten verfügbar, je nach Gerätegröße.

1000 meters length

One roll contains 1000 meters of foil, which is more than many competitors. This means that each roll can be used for around 500 exposures.

The practical **roll holder for walls** allows you to unroll the 1000 m quickly and easily. If the solarium itself does not have a holder for the roll, this roll holder can be mounted on the wall.

ALL BENEFITS AT A GLANCE

- *100% safe disinfection and UV permeability*
- *absolute hygiene*
- *fast and easy application*
- *high stability due to 12µm film thickness*
- *no dulling, abrasion or scratching of the acrylic surface*
- *various widths*
- *1000 meters length*
- *practical roll holder*
